# Competitive landscape walkthrough

November 12, 2026 | Team and manager | 13-minute walkthrough + 2 minutes of questions

OPERATOR NOTE: Open https://intel.johnnyaceii.com/app/landscape on the presentation computer and sign in. Save a changed tier with the checkmark next to its dropdown. If Driscoll's is already Tier 1, choose another tier and adapt the spoken line. Use the clickable links below for the six-brand comparison and July 30 story.

## 1. Frame the competitive landscape

| TIMING | CLICK / SHOW | SAY |
|---|---|---|
| **0:00 to 1:00** | Open Landscape using the link below and sign in on the presentation computer. Start with All companies and All berries. Choose Grid if Cards is selected.<br>Open Landscape and sign in | I want us to leave with two decisions: which competitors deserve the most attention, and which product differences we should test. I'll show the company landscape, change a priority live, compare six brand profiles, and connect that discussion to an actual competitor development. |
| **1:00 to 4:00** | Show the company roster, tier summary and pagination. The source script records 186 company records. | This is our company universe. The tiers are editable priorities, so we can organize the landscape around the companies we want to follow most closely.<br>For the retail discussion, I'm using Driscoll's, Fruitist, OZblu, Naturipe, Wish Farms and California Giant. The question is where we need to match an established offer and where a distinctive product could give us a reason to win. |
| **1:00 to 4:00** | In Company, enter Driscoll. Set Search in to Selected company set, then Find. In Grid, select Driscoll's name; inspect roles and portfolio, then close company detail. | Driscoll's connects proprietary genetics to a consumer brand. Other competitors bring different combinations of genetics, growing capability and routes to market. We need to understand both the offer shoppers see and the capabilities behind it.<br>For each priority company, I want to know what is changing in its product proposition, its genetics access and its route to market. |

## 2. Set priorities and compare flavor

4:00-10:00 | Continue the same investigation

| TIMING | CLICK / SHOW | SAY |
|---|---|---|
| **4:00 to 6:00** | In the Driscoll's, Inc. row, note its current saved tier. Choose Tier 1 (or another tier if already Tier 1); click the save checkmark. Wait for confirmation, then Clear search. | Let's say this company now deserves closer attention. I'll move it into Tier 1. |
| **4:00 to 6:00** | Show Driscoll's in the selected tier. Reload and confirm the assignment remains. | The change is saved. We can adjust the working priorities as our view changes. |
| **6:00 to 10:00** | Open the six-brand comparison using the link below, or choose Flavor simulation in navigation. Select all six. Keep SIMULATED visible.<br>Open six-brand flavor comparison | These brand profiles use simulated values to demonstrate the comparison; they are not product measurements or a real ranking. |
| **6:00 to 10:00** | Show Full flavor profiles. Use Compare attribute to switch between sweetness, acidity, aroma and firmness intensity. | This makes the product discussion more specific. Are we trying to compete on sweetness, a brighter sweet-acid balance, a stronger aroma, or a firmer bite? |
| **6:00 to 10:00** | Sweetness: Fruitist 7.4; California Giant 6.2. Switch to acidity: Fruitist 4.7; California Giant 6.0. | Here Fruitist is 7.4 for sweetness and 4.7 for acidity. California Giant is 6.2 for sweetness and 6.0 for acidity. That gives us a clear choice to explore: a sweeter, lower-acidity profile, or a more acid-forward balance. Which would matter most for the customer and use case we're targeting? |

## 3. Connect product questions to a real move

Finish the flavor comparison, then open the competitor development

| TIMING | CLICK / SHOW | SAY |
|---|---|---|
| **6:00 to 10:00** | Select Overall liking and show its separate 1-9 scale. | Here we switch from intensity to overall liking: the response we'd want to test. The other dimensions describe the product profile we want to validate. |
| **6:00 to 10:00** | Uncheck Wish Farms, then click Select all six to restore the cohort. | We can narrow the comparison to the brands that matter for a particular conversation. My next step would be a focused sample set and a decision about which product profile we want to validate. |
| **6:00 to 10:00** | Pause for one brief reaction. | Which of these attributes would you put first? |
| **10:00 to 12:00** | Open the July 30 Naturipe / Hortifrut - Mountain Blue story using the link below. Show Article or Brief. Return to investigation brings you back to News.<br>Open July 30 competitor story | Here is why genetics access belongs in the competitive landscape. In July, Naturipe and Hortifrut announced an expanded collaboration with Mountain Blue.<br>Hortifrut says the agreement gives it access to new blueberry selections for the US, Mexico, Peru and other Latin American markets. For us, the question is what differentiated fruit competitors can bring to buyers, and where we should focus our product benchmarking. |

Return to investigation brings you back to News.

## 4. Save the work and lead the discussion

12:00-15:00 | Protect the final two minutes for questions

| TIMING | CLICK / SHOW | SAY |
|---|---|---|
| **12:00 to 13:00** | Return to Flavor simulation and Select all six. Open Save / export; choose Save as a new investigation. Enter a unique name, click Save new investigation, then Reopen investigation. | I'll save this so we can return to the same companies and selections as the conversation develops. |
| **IF TIME** | If time permits: Save / export. Under Included sections, keep Scope findings only. Check Include SIMULATED flavor comparison annex; Preview complete output, then Download reviewed PDF. | We can take this dated output into the team discussion, with sources and the comparison clearly labeled. |
| **13:00 to 15:00** | Return to Landscape and show the tiered company view. Leave two minutes for discussion. Use direct controls for follow-ups. | The two decisions I'd like from the team are who belongs in our top-priority group and which product comparison we should validate first. Which company would you move, and what would you want to test against its offer? |

### Rehearsal reset

| | |
|---|---|
| **PRIORITIES** | Restore Driscoll's to its PRE-REHEARSAL saved tier with the Tier dropdown and save checkmark. Use the tier you noted before changing it. |
| **READY TABS** | Clear search. Select all six in Flavor simulation. Keep the browser open on the presentation computer for the demo. |
| **SAVE NAME** | Meeting: Competitive landscape - team demo - Nov 12. Use a different name for rehearsal. |
