Regina blackberry

VARIETY AND COMMERCIAL PROFILE · 13 NOVEMBER 2026

Regina is a blackberry promoted by Black Venture Farm (BVF), part of Frutura's Sun Belle berry business, with reported cultivation in Michoacán, Mexico. Public communications describe floricane fruiting and emphasize fruit quality; formal cultivar identity, rights, measured performance, and commercial scale remain unresolved. [1,2,3,4,5,7]

- **Public footprint:** BVF's 29 April 2026 field publication names Regina and Aketzali in Tocumbo. A separate plant offer includes Regina; neither establishes a launch date, acreage, or current stock. [1,2]
- **A separate raspberry bears the same name.** Regina records associated with Ilario Ioriatti and Berryplant concern raspberry and do not establish the blackberry's identity or traits. [14]

Evidence position

Topic	Position	Basis
Commercial name and offer	Regina appears in BVF's plant promotion.	Documented publication; stock availability unconfirmed. [2]
Production and location	BVF reports cultivation in Tocumbo, Michoacán. Los Reyes is the location of Sun Belle associated promotion, not a separately verified farm.	Reported. Destinations are unknown. [1,3]
Fruiting and developer	Floricane fruiting and BVF development/ownership are described in an industry post.	Reported; technical sheet and corresponding rights record not identified. [4]
Product proposition	Promotion emphasizes flavor, firmness, and appearance.	Marketing claims, not measured superiority. [3]
Identity, rights, and performance	Formal denomination, parentage, licensing terms, thorn status, harvest window, yield, berry specifications, disease response, and shelf life are not established.	Unknown.
Scale and adoption	Quantified area, a named grower base, sales history, and a Regina-specific retail program are not identified.	Unknown.

An integrated commercial platform

Black Venture Farm combines breeding, propagation, and grower support within Frutura's integrated Sun Belle berry business.

The Giddings acquisition was **announced in October 2023 and completed in 2024**. Frutura's sustainability report dates Giddings' formal entry into the group to **October 2024**. At announcement, BVF was Giddings' wholly owned Mexican breeding subsidiary. [6,8,15]

In December 2024, Frutura consolidated its berry operations under the Sun Belle brand and renamed the Mexican operations Sun Belle Mexico. Contemporary coverage identifies BVF as a wholly owned subsidiary of Sun Belle Mexico. The current Frutura portfolio confirms BVF's breeding/propagation role and Sun Belle's marketing role. [5,7]

Business capability	Existing role
BVF	Breeding, nursery propagation, and technical support for growers.
Mexican growing operations	Production within the Sun Belle Mexico business.
Sun Belle	Berry marketing and distribution to North American and international customers.

The group has an established breeding-to-market network. The reviewed sources do not identify a Regina-specific buyer program, destination market, exclusivity arrangement, or retail listing.

Identity, breeding, and rights

Regina is documented as a commercial name; its legal denomination or selection code has not been established. An industry post attributes development/ownership to BVF. Breeding location and country of origin, parentage, selection history, and introduction date are undocumented in the reviewed material. Mexican cultivation does not by itself establish Mexican breeding origin. [2,4]

An exact-name CPVO search on 12 November 2026 returned eight records and no blackberry match; its only *Rubus* result was raspberry. This search does not exclude protection under another denomination or in another jurisdiction. Regina-specific patents, variety rights, license territories, royalties, and exclusivity remain unidentified. [16]

Aketzali holds an issued USDA plant variety protection certificate, dated 4 June 2021 (certificate 202000246). This documents protection for another BVF blackberry; it does not identify Regina's rights. [9]

Agronomic and fruit information

Attribute	Publicly available detail
Fruiting habit	Floricane, reported in an industry post; no breeder technical sheet identified. [4]
Plant and season	Thorn status, vigor, growth habit, yield, harvest window, disease response, and climate adaptation are undocumented.
Fruit and postharvest	Flavor, firmness, and appearance are promoted. Berry weight, dimensions, Brix, acidity, measured firmness, shelf life, and shipping results are unavailable. [3]

Commercial comparisons

The comparisons cover BVF's existing portfolio, proprietary Mexican-market programs, and a Brazilian agronomic reference.

Variety / program	Commercial context	Production or product focus
Regina — BVF	Public plant offer and reported Michoacán cultivation; destination program unidentified.	Reported floricane; quality promoted without a published specification. [1,2,3,4]
Aketzali — BVF / Sun Belle	Issued US protection; Sun Belle identifies Mexican production.	Established same-platform blackberry with an official variety description in its protection dossier. [9,10]
Tupy — Embrapa	Brazilian breeding and cultivation reference in Embrapa's guide.	Erect, vigorous, thorned. The cited description concerns Brazilian conditions. [11]
Black Sultana — Planasa	Listed in Planasa's Mexican catalog.	Primocane variety promoted for flexible production, fruit quality, and shelf life. [12]
Sweet Karoline — Berry Fresh	Berry Fresh identifies Jalisco production and a November–June harvest.	Exclusive breeding program marketed around sweetness and retail differentiation; fruiting habit not specified on the cited product page. [13]

No direct trial comparing Regina with these varieties was identified in the reviewed sources. The table describes commercial alternatives and positioning, not a performance ranking.

Questions for further investigation

The following questions define the information still missing from Regina's public profile.

Research area	Open questions	Relevant records or data
Identity and access	What legal denomination/code corresponds to Regina? Who bred it and holds rights? Where and on what terms is it available?	Breeder description, authenticated plant labels, registry filings, and license terms.
Production	What are its harvest window, saleable yield, picking cost, and response to local climates and diseases?	Identity-linked trials and farm records, with location, season, crop age, and management specified.
Fruit and shipping	What size, flavor, firmness, shelf life, and arrival quality does it deliver?	Fruit specifications, sensory results, and shipment trials with handling conditions and any controls identified.
Commercial footprint	Which farms, nurseries, buyers, and retailers handle Regina? What area, volumes, destinations, and adoption trend are documented?	Dated planting and sales records, named programs, and cultivar-specific packaging or retail listings.

The reviewed material establishes public promotion and reported field cultivation. It does not establish the scale or trajectory of commercialization, including expansion, decline, or discontinuation.
